

## About IV Nutraceutical Therapy

Your body is constantly taking in, using and losing vital nutrients. Vitamins, minerals, and amino acids are required for your body to maintain homeostasis, fight infections, grow, and function properly.

IV nutraceuticals are appropriate for those who dehydrate easily due to activity or illness, but are also great for boosting immunity, fighting fatigue, and improving physical appearance. Our infusions are tailored to your needs and goals with combination therapy and options for additional vitamins, minerals, and nausea medications.
